Sports

All athletes want to get as much out of their training as possible.

Do you want:

- to motivate, increase performance, get better results and be proactive regarding injury prevention?
- mobility in the field and full freedom of movement for the athlete during measurements?

Kine system offers you a set of tools with which you can easily analyse and explain critical movements. This enables you to optimize performance and prevent injuries. You get better results with the invaluable information from the system.

Research

Researchers are eager to acquire new knowledge..

Are you interested in:

- the best signal quality possible?
- measuring the subject in as normal a setting as possible?
- full freedom of movement for the subject?
- a mobile setup?

Kine offers a research system that combines superb EMG quality with the highest mobility and intuitive video based tools to analyze kinematics and muscle activity. The tools can be synchronized to your motion lab and the hardware can be integrated into third party software. Kine tools give you ultimate freedom and quality in research.

Kine systems offer

Tools for Evidence Based Methods

- Measure progress
- Compare results
- Report
- Objective results

Rehabilitation

Do you care for your client and strive for improvements in his treatment and well-being? Do you want

- your client to truly understand what he needs to do in order to get lasting results?
- to motivate your clients within their exercise schedule in a simple and efficient way?
- to document the client's progress with objective and evidence-based methods?

With the use of Kine intuitive products, you can objectively measure the result of an intervention. The feedback of motion control also gives the client better understanding of the problems and the motivation to train. This way you gain time and efficiently improve and accelerate rehabilitation.

Consulting & Courses

Are you a clinician or researcher who wants:

- to learn more about EMG and motion analysis
- to solve a specific problem?
- an edge in your clinical work?

Kiso and our knowledge-network-contacts have experience in teaching, leading courses and consulting, professional advice in training, rehabilitation, preventive intervention and motion analysis.

Take advantage of Kiso's extensive knowledge and network, and reach new heights in the quality of your work

World's Leading Wireless EMG

- High quality data
- Fast and easy to use
- Maximum freedom of movement
- Wireless range up to 50 meters
- Integration into 3rd party software
- On-board memory ensures data integrity

Biofeedback

- Evidence based rehabilitation intervention
- Train and conduct therapy more effectively
- Increase understanding of motor control and muscle awareness
- Accelerate rehabilitation
- Get lasting results

Easy to handle, intuitive to use and superior in quality.

According to our users

**Our strength lies in our eagerness to grasp the opportunities
that lie ahead, reach our goals and grow in the market,
giving us the ability to do better today than yesterday.**

Kiso is an international company in the fields of wireless
Electromyography (EMG) and motion analysis technology.
Our vision is to lead the industry and ensure a great return for our customers.

Kiso's first priority is the safety of our clients when using Kine products.
Kiso is committed to fulfilling statutory requirements.

At Kiso, we strive for efficiency, flexibility and precision in a quantitative way.
We take pride in being reliable and friendly in everyday dealings
with our customers and develop long-lasting relationships with them.
